JIEMING ZHANG

U.S. Citizen | 703-232-6926 | jiemingzhang23@gmail.com
github.com/jmyz23 | linkedin.com/in/jieming-zhang-a6540a2b9 | Charlottesville, VA

EDUCATION

University of Virginia **Charlottesville, VA**
B.S. Computer Engineering & B.S. Electrical Engineering, ***GPA: 3.9*** *Expected May 2029*
Relevant Coursework: Computer Systems Organization I, CPU Architecture, Digital Logic Design

TECHNICAL SKILLS

Languages: Python, C++, Java, VHDL, Assembly
Software & Web: Playwright, Beautiful Soup, HTML, Git
Data & Visualization: Matplotlib, SciPy, CSV Processing
Systems: Linux, Vim, ESP32, I2C, SPI

TECHNICAL PROJECTS

Assignment Dashboard **Spring 2026**
Python Automation & Local Web Application | Personal Project
- Built a local web interface that consolidated Gradescope and Canvas assignments, deduplicated records, normalized deadlines, and surfaced date-based warnings.
- Implemented sorting by course or due date, direct assignment links, and user-triggered rescrapes with Playwright and Beautiful Soup.

IoT Golf Swing Analyzer & Visualizer Prototype **Summer 2026**
Python Analytics & Embedded Data Pipeline | Personal Project
- Built a first-prototype ESP32 PCB (~$20 components) with 3.7V LiPo-to-3.3V power management, BNO055 I2C, and MicroSD SPI interfaces.
- Implemented firmware that logs 100 Hz quaternion and accelerometer data to CSV and a Python pipeline that applies hand-tuned drift compensation, estimates clubhead velocity, and renders 3D swing trajectories.

Toy ISA Assembly Programming **Fall 2026**
Computer Systems Organization I | UVA
- Wrote Fibonacci, bitwise, loop, stack-operation, and arithmetic programs for an 8-bit ISA and translated hand-encoded hexadecimal programs into assembly using Vim on Linux.

ENGINEERING EXPERIENCE

Virginia Motorsports (Formula SAE) **Fall 2025 - Present**
Data Acquisition (DAQ) Subteam Member | University of Virginia
- Contributing to a redesign consolidating 5 PCBs into one centralized board handling 17 analog inputs across 4 sensor types.
- Designed schematics for the redesign and helped lay out the 2-layer spring 2026 prototype PCB in Altium and KiCad for sensor integration and data logging.
- Implemented an SD logging function that acquires a priority-based mutex and writes shared DAQ struct values to CSV on an SD card.

HACKATHON EXPERIENCE

VTHacks 14 **Sep 2026**
2-person team | Embedded Systems & Wireless Sensing
- Built ESP32 firmware that scanned 2.4 GHz Wi-Fi and Bluetooth traffic for packet counts and RSSI, storing an empty-room baseline in nonvolatile memory.
- Added a command to set a packet-count anchor and linearly rescale the density score from that anchor.
